Facebook model

Facebook model

It permits to display

- o either the private and public posts of your private Facebook account
- o or the public posts of any other Facebook Web page

Facebook account: Creation of an AppID and User Access token

The architecture of this model is based on Facebook developer API. So it is required to create an **App ID** and a **User Access Token** from your Facebook account

Ex :

- **App ID**
    - o Ex :

        25099610205658

- **User Access Token**
    - o Ex :

        AADkR4ZBK6YsBAO8bpfTponlhMZB2lbXmrxcUIpYFgUzNVcKMsSoVBytsa05Rp5QkeSNdse2xNz2HcabUauaCjsuOdVF1 17SppNuscfpurVZBax0a3FD5g8VShddE9TM5aeNod8ZA1EGveyAfZCpBcjjsLYC5uJxJ0pvNYYJOtQZDZD

To create your AppID and your user access token, follow the « How to » in the Innes guideline :

or click on

https://www.innes.pro/widgets/facebook/index.html

Afterwards, store preciously this information provided by Facebook

- **App ID**
- **User Access Token** (expires after 60 days !)
- Client Token (is reuired to be able to generate a new User Access Token when it has expired)

WARNING: Some Facebook accounts have been unexpectedly blocked by Facebook moderator when using Facebook developer API. We recommend to take some precaution when using this model and reading Facebook usage conditions https://fr-fr.facebook.com/terms (particularly the chapter 4). Indeed to prevent Facebook to block your account, you have to warranty the unicity and the validity of the private datas which are provided to Facebook.

Facebook model thumbnail

The Facebook model is embedded in the model pack 3.49 (or above version).

Facebook model form

- field « **Facebook application identifier** » : fill with your **AppID**
- field « **User access token** » : fill with your **User Access token** (attention : don't mistake with **Client token** !)
- Mode « **Display publications from** »
